

Project Development Phase
Model Performance Test

Date	12 November 2022
Team ID	PNT2022TMID16537
Project Name	Deep Learning Fundus Image Analysis for Early Detection of Diabetic Retinopathy
Maximum Marks	10 Marks

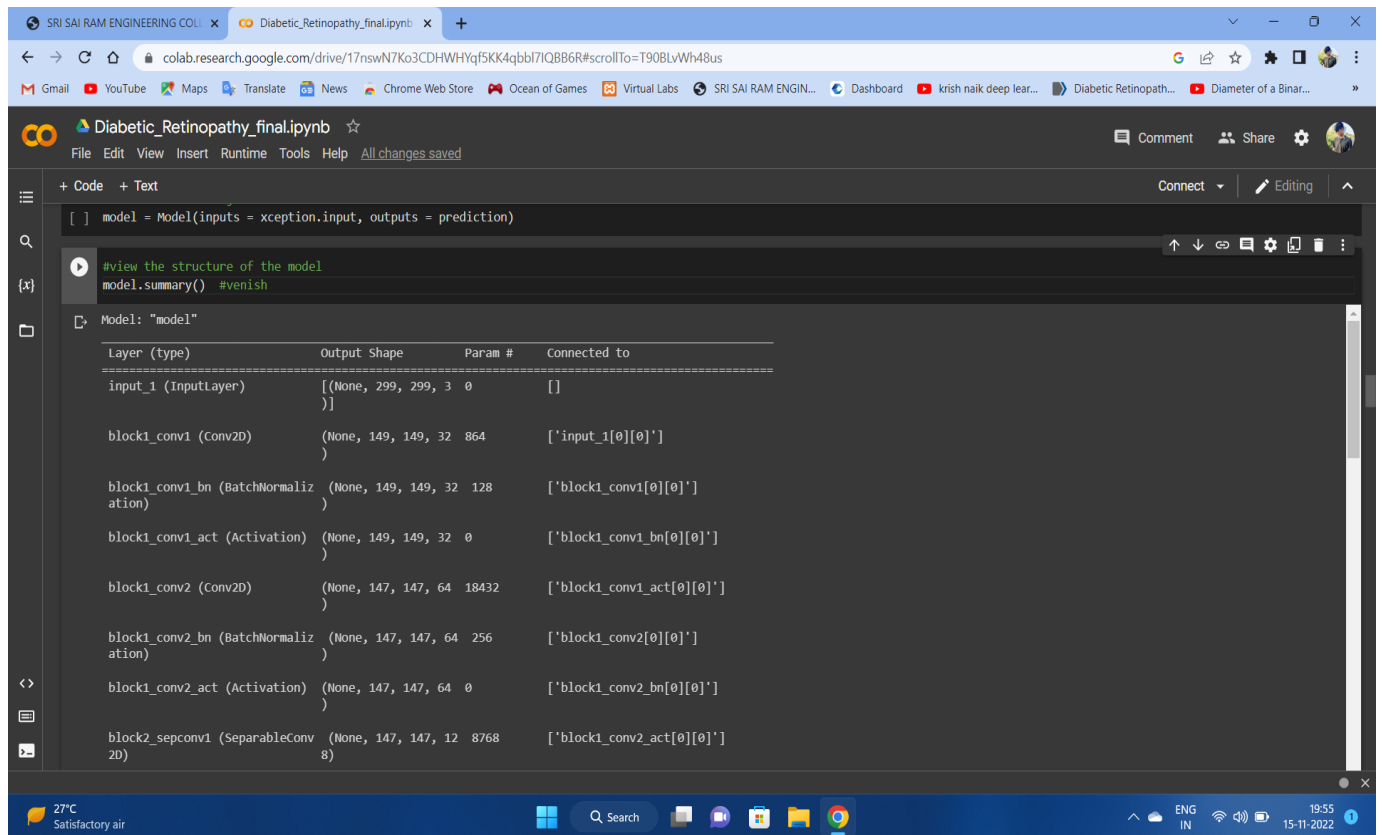

Model Performance Testing:

Project team shall fill the following information in model performance testing template.

S.No.	Parameter	Values	Screenshot
1.	Model Summary	Total params: 21,885,485 Trainable params: 1,024,005 Non-trainable params: 20,861,480	Attached below
2.	Accuracy	Training Accuracy - 72% Validation Accuracy - 59%	Attached below
3.	Confidence Score (Only Yolo Projects)	Class Detected - NILL Confidence Score - NILL	NILL

SCREENSHOTS :

MODEL SUMMARY :

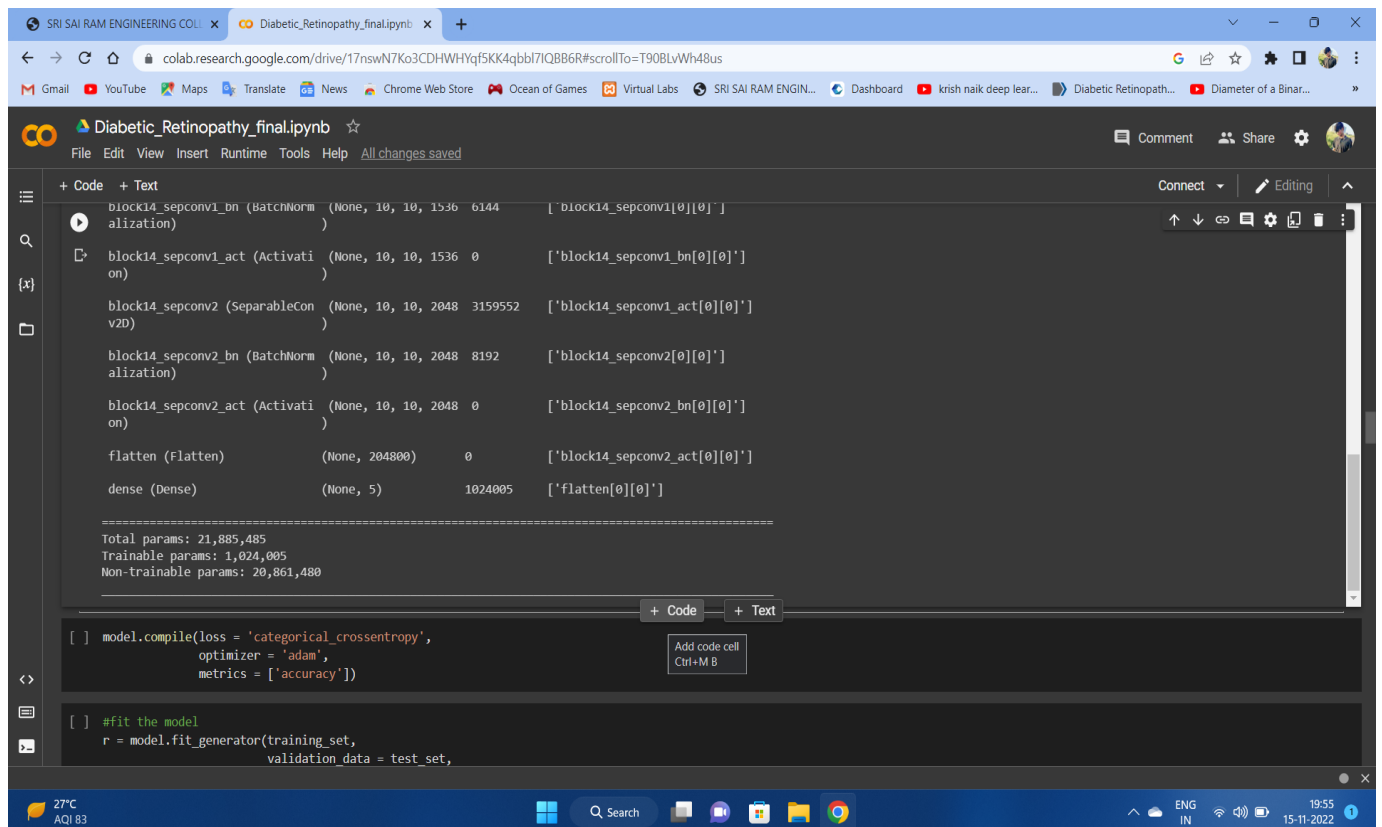

The screenshot shows a Google Colab notebook titled "Diabetic_Retinopathy_final.ipynb". The code cell contains the following Python code:

```
[ ] model = Model(inputs = xception.input, outputs = prediction)

#view the structure of the model
model.summary() #venish
```

The output of the code is a summary of the model structure, displayed as a table:

Layer (type)	Output Shape	Param #	Connected to
input_1 (InputLayer)	(None, 299, 299, 3)	0	[]
block1_conv1 (Conv2D)	(None, 149, 149, 32)	864	['input_1[0][0]']
block1_conv1_bn (BatchNormalization)	(None, 149, 149, 32)	128	['block1_conv1[0][0]']
block1_conv1_act (Activation)	(None, 149, 149, 32)	0	['block1_conv1_bn[0][0]']
block1_conv2 (Conv2D)	(None, 147, 147, 64)	18432	['block1_conv1_act[0][0]']
block1_conv2_bn (BatchNormalization)	(None, 147, 147, 64)	256	['block1_conv2[0][0]']
block1_conv2_act (Activation)	(None, 147, 147, 64)	0	['block1_conv2_bn[0][0]']
block2_sepconv1 (SeparableConv2D)	(None, 147, 147, 12)	8768	['block1_conv2_act[0][0]']

The screenshot shows the same Google Colab notebook, but with the code cell scrolled down to show the second part of the model summary. The code cell contains the following Python code:

```
[ ] model.compile(loss = 'categorical_crossentropy',
                  optimizer = 'adam',
                  metrics = ['accuracy'])

#fit the model
r = model.fit_generator(training_set,
                       validation_data = test_set,
```

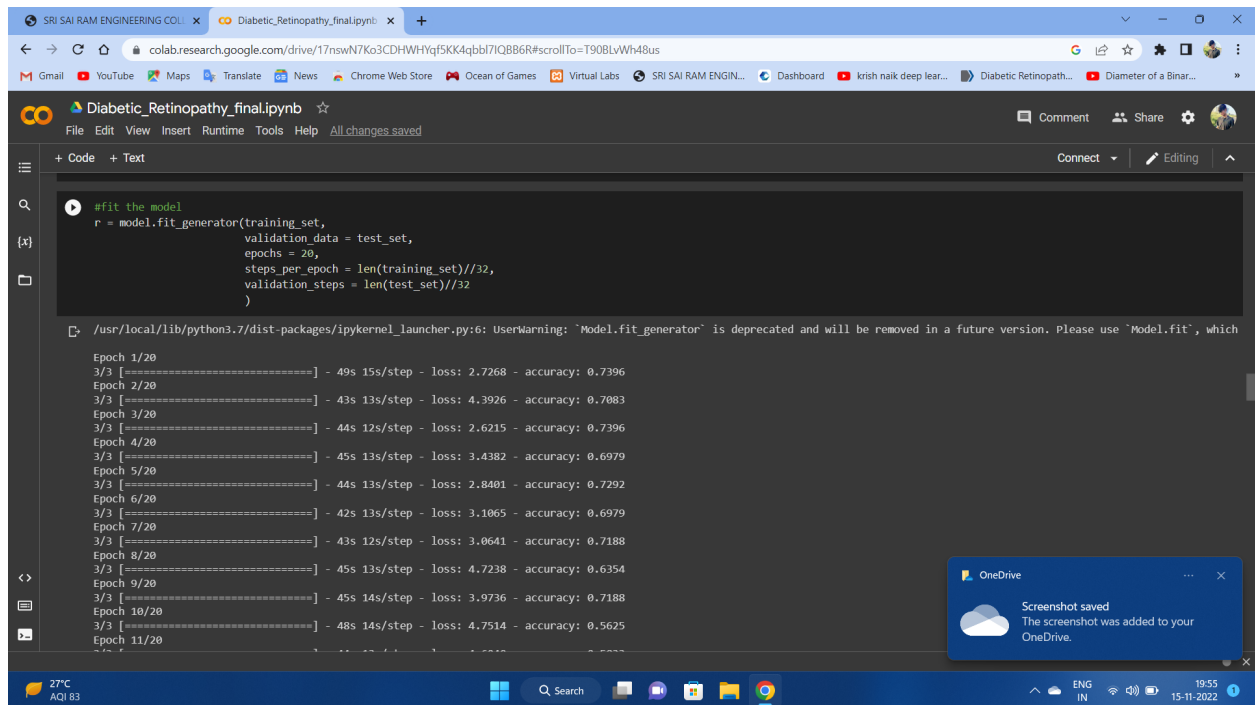

The output of the code is a summary of the model structure, displayed as a table:

Layer (type)	Output Shape	Param #	Connected to
block14_sepconv1_bn (BatchNormalization)	(None, 10, 10, 1536)	6144	['block14_sepconv1[0][0]']
block14_sepconv1_act (Activation)	(None, 10, 10, 1536)	0	['block14_sepconv1_bn[0][0]']
block14_sepconv2 (SeparableConv2D)	(None, 10, 10, 2048)	3159552	['block14_sepconv1_act[0][0]']
block14_sepconv2_bn (BatchNormalization)	(None, 10, 10, 2048)	8192	['block14_sepconv2[0][0]']
block14_sepconv2_act (Activation)	(None, 10, 10, 2048)	0	['block14_sepconv2_bn[0][0]']
flatten (Flatten)	(None, 204800)	0	['block14_sepconv2_act[0][0]']
dense (Dense)	(None, 5)	1024005	['flatten[0][0]']

Below the table, the total number of parameters is listed:

```
Total params: 21,885,485
Trainable params: 1,024,005
Non-trainable params: 20,861,480
```

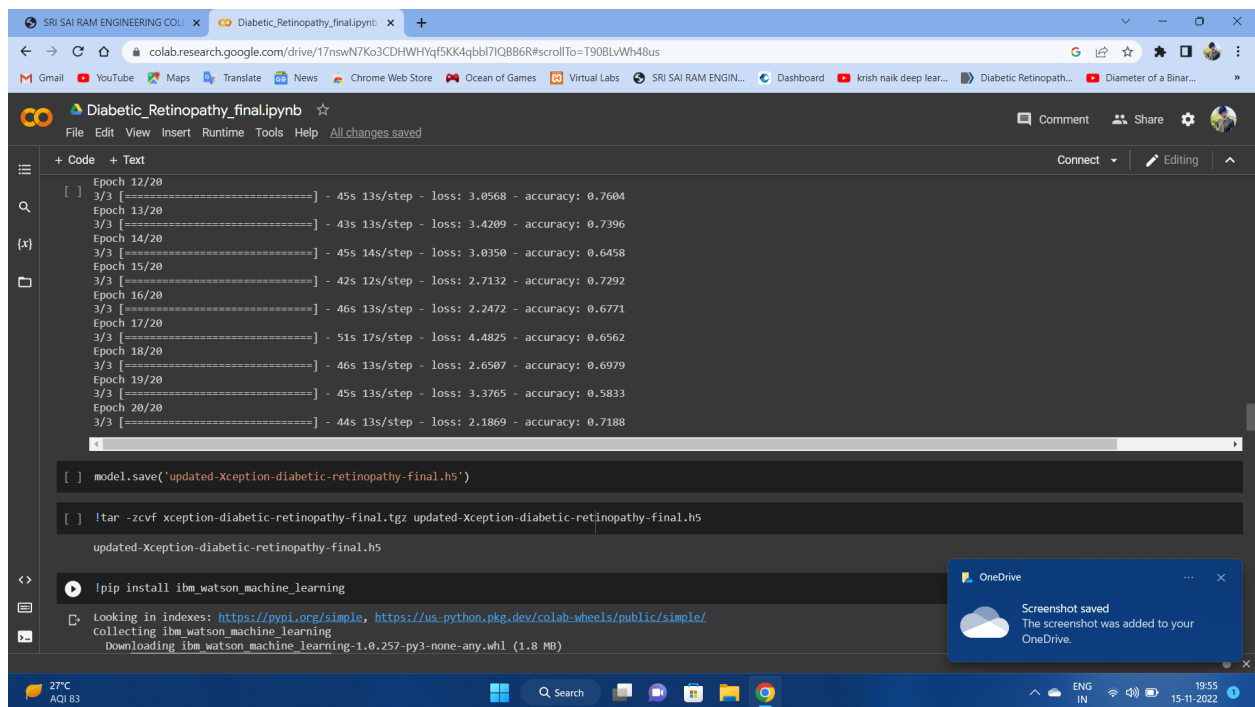

ACCURACY :

```
#fit the model
r = model.fit_generator(training_set,
                        validation_data = test_set,
                        epochs = 20,
                        steps_per_epoch = len(training_set)//32,
                        validation_steps = len(test_set)//32
                        )

/usr/local/lib/python3.7/dist-packages/ipykernel_launcher.py:6: UserWarning: `Model.fit_generator` is deprecated and will be removed in a future version. Please use `Model.fit`, which
